Intrinsic value function In economics and decision theory, intrinsic value is the maximum utility (or value) one can obtain from an object or an action. It is a subjective measure of the desirability of an object, goal, or situation. It has been associated with the concept of basic value as the pre-theoretical basis for rational choice. The concept has been formalized by Ramsey and others, and is sometimes used interchangeably with expected utility. See also Expected utility

Toys that stimulate the natural curiosity of a young child make them more creative and more interested in learning new things. In a market dominated by advanced electronic gadgets, toys have a tremendous share of the home market. Because of the market sensitivity, a toy manufacturer has to produce a toy that appeals to the child and is also attractive to the adult. Among the most popular toys are toys which entertain the child while at the same time stimulating the curiosity and the natural sense of wonder of a young child.

These toys typically stimulate the child by presenting a visual puzzle and an accompanying intellectual challenge. One such toy is disclosed in U.S. Pat. No. 4,959,745 to Rosen, which is directed to an educational toy device and a method for teaching young children. The device of the Rosen '745 patent includes a base having a slot and a plurality of balls mounted on a plurality of posts for rolling down the slot. The playing field includes a number of circular openings in various colors, and corresponding colors of paint balls are associated with each opening. Additional prior art patents disclosing educational toys having a plurality of playing fields are the U.S. patents to Kim (U.S. Pat. No. 5,547,161), Rauf (U.S. Pat. No. 5,772,546), Wren (U.S. Pat. No. 5,913,685), and Redfern (U.S. Pat. No. 5,926

Import, markup, and edit text and other external files. Automatically make corrections to imported text or other files. Edit the imported text, change properties, or edit the external file with ease. (video: 3:35 min.) Work with external drawings: Create AutoCAD Extensions. Send drawings to users, share models with other users, even invite people to collaborate on the same drawing. (video: 2:25 min.) Tools for Faster and Simpler Graphics: Preview and manipulate models more efficiently with the Graphics-Designer feature. Quickly

and easily zoom, pan, or even rotate and pan a selected object in a drawing. (video: 1:29 min.) Reduce the effort and time spent creating new drawings by copying layers and setting all the necessary view and scale settings. (video: 2:22 min.) Save time and effort when you start a new drawing or open a new file. With Automatically Save View, your current drawing and view will automatically be saved when you close the drawing or open a new drawing or file. (video: 2:12 min.) New commands for co-authoring and collaboration: Designate a drawing or file as your home or default drawing. And, set up a folder for co-authoring on any drawing, library, or user folder. (video: 1:55 min.) Sharing Download and use AutoCAD Addons and Dynamic Input. AutoCAD customers now can start drawing in seconds and see what others are doing, thanks to AutoCAD Addons and Dynamic Input. (video: 1:22 min.) With new Dynamic Input, new features enable you to incorporate others' designs into your own drawings, like the new Feedback Dialog and the new drawing-sharing capabilities in AutoCAD Addons. (video: 3:30 min.) Now you can get feedback for your designs by adding them directly to your current drawings or even a new drawing with AutoCAD Addons, so you can incorporate the user's changes directly into your drawing.
